## Certified Information System Security Professional (CISSP) Program (NEW!)

Our Certified Information Systems Security Professional (CISSP) Certification Prep course will prepare students for one of the preeminent Information Security Certifications in business today. Reviewing and examining the 10 domains of the CISSP realm will allow students to identify and implement the best security configurations to protect critical information, infrastructure and systems.

**Major topics include:** Plans, Security Architecture, Network & Wireless Security, Cryptography, and Legal Compliance.

*This CISSP course will help prepare students for the challenging CISSP certification test.*

**Course Objectives:** Upon completion of this course, the student should be able to:

Author a business continuity plan and disaster recovery plan.

Understand basic concepts within cryptography.

Understand the principles in the governance of security.

Know and understand how to execute a Business Impact Analysis.

Know what laws are applicable to computer crime.

Understand the key elements in operations security.

Understand the key elements in securing a facility.

Understand security models and how they are used in information flow.

Understand and implement the TCP/IP model.

Understand and implement wireless security protocols.

Discuss the proper configuration for firewalls and routers.
